

### **Microblade Pre-Treatment Instructions**

Since delicate skin or sensitive areas may swell slightly, or redden, it is advised not to make social plans for the same day.

Please wear your normal make-up to the procedure. If you are having brows done, please bring your favorite pencils.

If unwanted hair is normally removed in the area to be treated, i.e.; tweezing or waxing, the hair removal should be done at least 24 hours prior to your appointment. Electrolysis should be done within 5 days of the procedure. Do not resume any method of hair removal for 1 week following the procedure.

If eyebrows are normally dyed, do not have that procedure done within 48 hours of your appointment. Wait 1 week following your procedure before dying eyebrows.

Allergy testing of the pigment is recommended before the planned procedure.

Limit the use of aspirin or ibuprofen prior to your scheduled procedure.

\*Please feel free to contact us with any questions regarding your appointment or the procedure itself; we are here to make you feel comfortable. We recommend using the space below to make notes on discussion items so that we may go over them together.

Notes:
