

Treatment of Warts with Salicylic Acid

1. Soak warts in lukewarm water for 5 minutes.
2. Apply small amount of paste with a toothpick.
3. Cover with a tight bandage or piece of tape overnight. Wash off in morning.
4. Re-apply nightly for 2 weeks.
5. May use emery board or nail file to file off dead skin.
6. Wait for whole area to heal. (Whiteness will disappear).
7. If warts remain, repeat treatment for 2 more weeks, then stop.
8. Do not get this medication on any mucous membrane or in your eyes. Wash your hands after applying this to your warts.
